Window Server 2012 R2

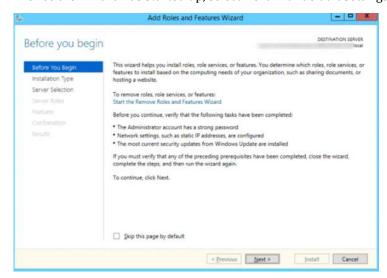

- 1. Adding the Windows 2012R2 Server Domain Services Role
 - Execute Server Manager

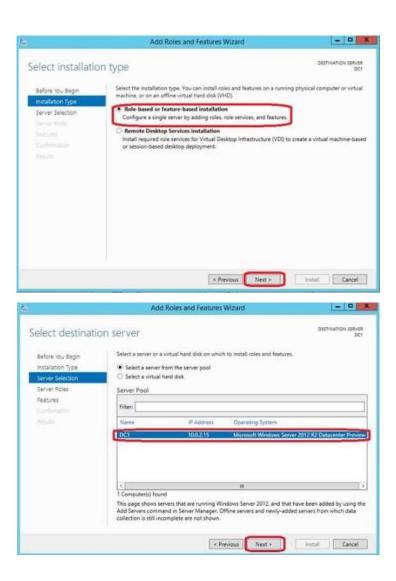

• click on Manage and select Add Roles and Features Wizard.

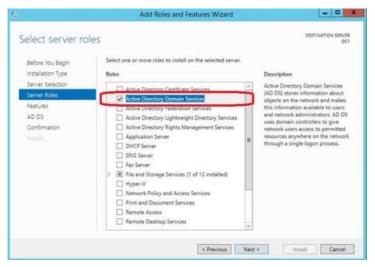

• Once the Wizard has started up, select Next with default settings

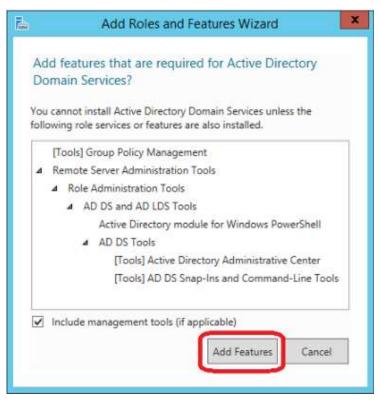

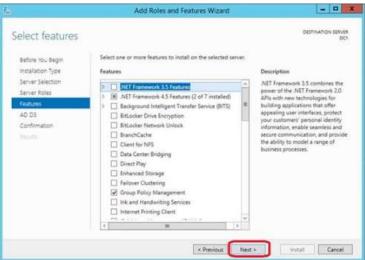

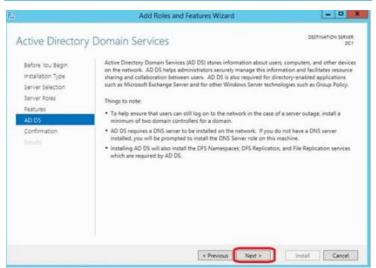

On the Server Roles page, select Active Directory Domain Services
, DNS Server, and DHCP Server

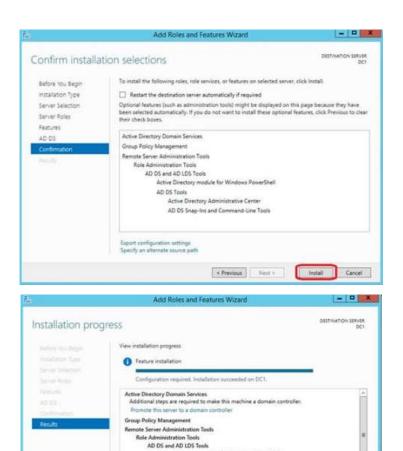

Click Add Features.

In the server manager click the alert in the upper right.

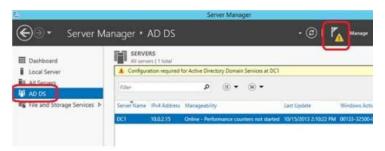

Active Directory module for Windows PowerShell

Active Directory Administrative Center AD DS Snap-Ins and Command-Line Tools

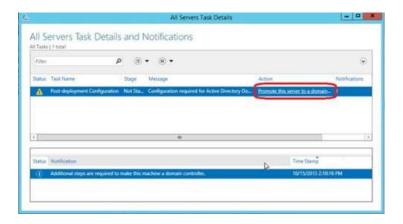

You can close this wisard without interrupting running tasks. View task progress or open this page again by clicking Notifications in the command bar, and then Task Details.

← Previous Next > Class Cancel

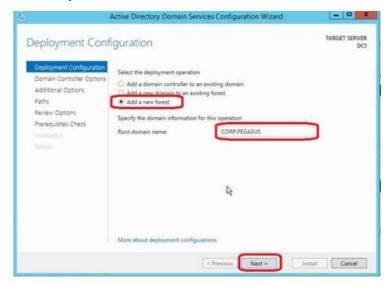

AD DS Tools

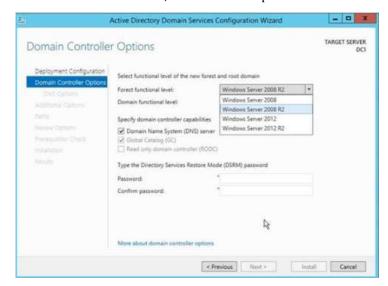

• In that window click Promote this server to a domain controller

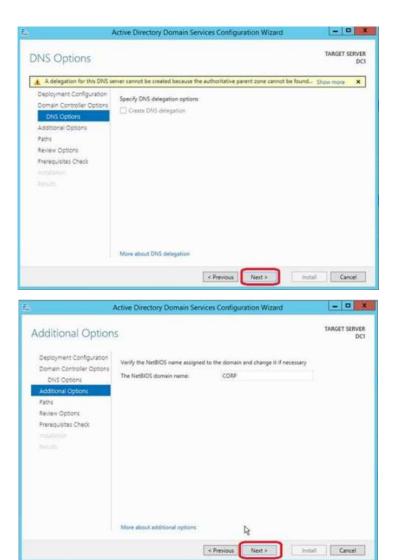

• In this example I select to create a new forest. I choose a domain name too.

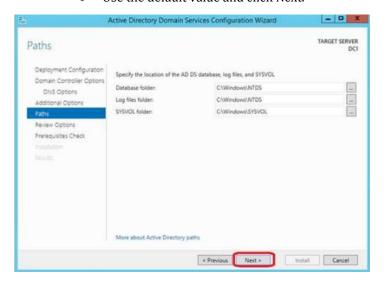

• Select the Functional level, enter the DSRM password and click Next.

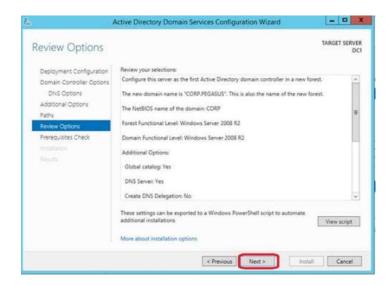

• Click Next! (and ignore that error, it's a normal error)

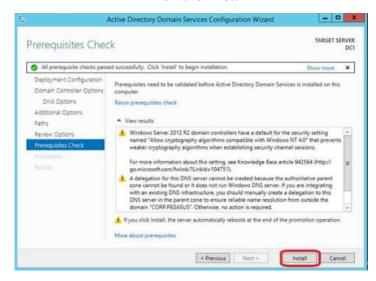

• Use the default value and click Next.

• Now click Install!

After a reboot we can finally login with our domain credential!
